Forgotten Books, United States, 2015. Paperback. Condition: New. Language: English . This book usually ship within 10-15 business days and we will endeavor to dispatch orders quicker than this where possible. Brand New Book. Excerpt from A Multiclass Hybrid Production Center in Heavy Traffic This paper presents an analysis of a hybrid production system that makes multiple types of products, some of which are produced to inventory (make-to-stock), while others are produced in response to actual customer demands (make-to-order). We develop a procedure for performance analysis of the production system depicted in Figure 1. In particular, we envision the production process as a single aggregate operation with first-in-first-out (FIFO) service discipline. Production of make-to-stock items follows a policy of one-for-one replenishment. That is, a base stock level is specified for each type of products; demand is filled from finished-goods-inventory; and each item pulled from inventory triggers a replenishment order to restore the finished-goods-inventory to the desired base stock level. Demands that cannot be met due to insufficient inventory will be considered lost. We propose to study the production system depicted in Figure 1 via the mixed queueing network shown in Figure 2. Station 0 represents the workstation (hereafter interchangeably referred to as workcenter): an arrival at station 0 signals a production request and each service completion at station 0 corresponds to the production of an item. Stations 1 to model the finished-goods-inventories (FGI) for make-to-stock products: items in queue k represent the FGI of type k (1 About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books.
