

## Electronic Quenching of the A(0+ U) State of Bi2 (Paperback)

Filesize: 3.95 MB

### ***Reviews***

*Complete guideline for ebook lovers. Better then never, though i am quite late in start reading this one. Its been printed in an remarkably simple way in fact it is only right after i finished reading this book through which in fact transformed me, alter the way in my opinion.*

## ELECTRONIC QUENCHING OF THE A(0+ U) STATE OF BI2 (PAPERBACK)

Biblioscholar, United States, 2012. Paperback. Condition: New. Language: English . This book usually ship within 10-15 business days and we will endeavor to dispatch orders quicker than this where possible. Brand New Book. Temporally-resolved laser induced fluorescence of high vibrational levels in Bi2 A( u 0) above and below the predissociation limit of  $v = 22$  were investigated by observing total fluorescence from a wavelength tunable, pulsed dye laser. Electronic quenching of Bi2 A( u 0) by five collision partners (Ne, Ar, Kr, Xe, N2) was examined for four vibrational levels ( $v = 22, 23, 24, 25$ ). Electronic quenching by a sixth collision partner (He) was examined for eight vibrational levels ( $v = 18$  through 25). The quenching from stable vibrational levels ( $v = 22$ ) was independent of vibrational quantum number. A significant increase in quenching occurs for the predissociated level  $v = 23$ . Electronic quenching transfer rates ranged from  $227.3$  to  $850.5 \times 10^{-13} \text{ cm}^3 \text{ molec}^{-1} \text{ sec}^{-1}$  for  $v = 22$  and from  $741.2$  to  $1570 \times 10^{-13} \text{ cm}^3 \text{ molec}^{-1} \text{ sec}^{-1}$  for  $v = 23$ , and are very nearly gas kinetic for  $v = 23$ . Electronic quenching of higher vibrational levels ( $v > 23$ ) was not temporally resolvable by the experimental apparatus.
